## “RMI Client-Server Query”

Advisor: Madjid S. Mousavi

Manideep Reddy Gillela CWID-10431192

Shivam Patel CWID-10422123

## Introduction:

This is a simple Rmi(Java Remote Method Invocation) Client-Server Program that allow the Client to query for the “first name” of a student and to receive the list of “last name” of student with the same name. The Server will query a postgres database to receive the list of student to pass to the Client.

## Project setup:

### ➤ Database:

1. Import database cpe\_545.pgsql by following the link:
2. Name of database:cpe\_545
3. Localhost:5432

<https://www.interserver.net/tips/kb/export-import-postgresql-database/>

### ➤ Server side:

1. It is necessary set the database postgresql by changing username and password in Implement.java.

```
String DB_URL = "jdbc:postgresql://localhost:5432/cpe_545";
```

```
String USER = "postgres";  
String PASS = "manideep1116";
```

2. The Server is set up to work on localhost and local port, then it is not necessary change the IP address in the code.

### ➤ Client side:

1. Take note of the Server machine’s IP address if operating in two different systems.
2. Open Implement.java and place the IP address in place of local host.

## Server steps

- Change the Directory to the destination folder
- Compile all the java files
- Javac \*.java
- Start the registry on the specific port
- start rmiregistry
- Start the Server Program
- java -cp .;postgresql-42.1.4.jar -Djava.security.policy=Client.policy Server

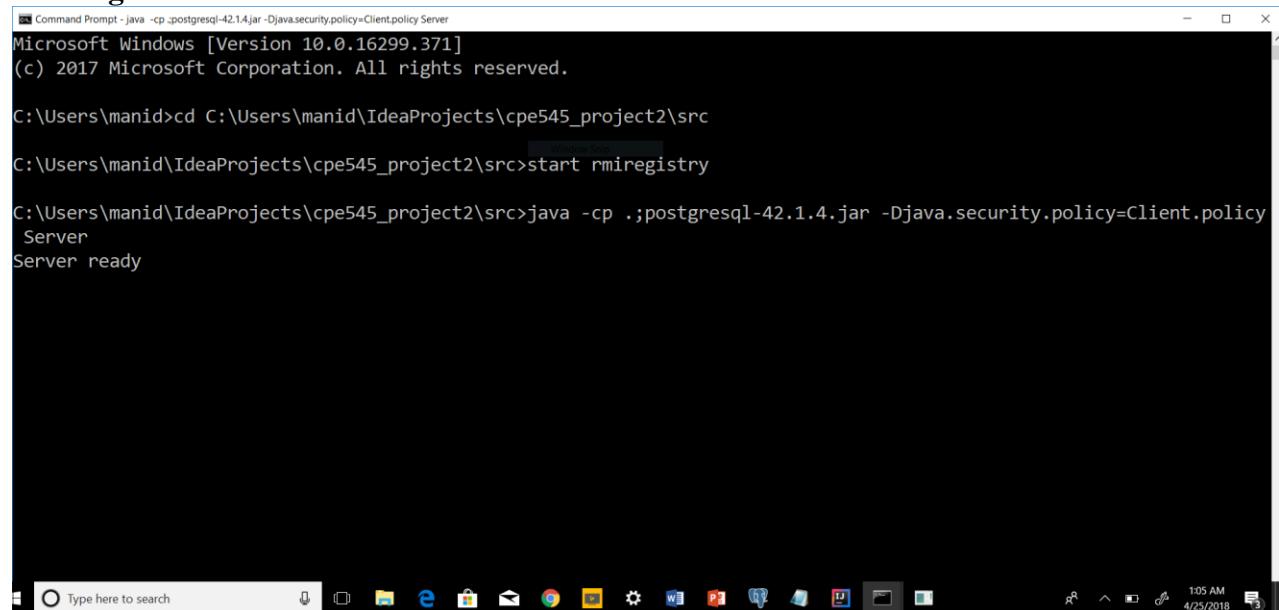

## Client Steps

- Change the Directory to the destination folder(...\cpe545\_project2\src)
- Compile all the java files
  - `Javac *.java`
- Start the Client Program
  - `Java -Djava.security.policy=Client.policy Client`

## Guide to start simulation:

Open command prompt and follow server steps.  
Open another command prompt and follow client steps.  
Now the Client and the Server are ready to communicate.

## Starting server:

```
Command Prompt - java -cp .;postgresql-42.1.4.jar -Djava.security.policy=Client.policy Server
Microsoft Windows [Version 10.0.16299.371]
(c) 2017 Microsoft Corporation. All rights reserved.

C:\Users\manid>cd C:\Users\manid\IdeaProjects\cpe545_project2\src
C:\Users\manid\IdeaProjects\cpe545_project2\src>start rmiregistry
C:\Users\manid\IdeaProjects\cpe545_project2\src>java -cp .;postgresql-42.1.4.jar -Djava.security.policy=Client.policy
Server
Server ready
```

## Starting client:

```
Command Prompt - Java -Djava.security.policy=Client.policy Client_RMI
Microsoft Windows [Version 10.0.16299.371]
(c) 2017 Microsoft Corporation. All rights reserved.

C:\Users\manid>cd C:\Users\manid\IdeaProjects\cpe545_project2\src

C:\Users\manid\IdeaProjects\cpe545_project2\src>Java -Djava.security.policy=Client.policy Client_RMI
=====
-----Connected to Server-----

Please insert first name of a student:
```

## After entering first name:

```
Command Prompt - Java -Djava.security.policy=Client.policy Client_RMI

C:\Users\manid\IdeaProjects\cpe545_project2\src>Java -Djava.security.policy=Client.policy Client_RMI
=====
-----Connected to Server-----

Please insert first name of a student:
manideep
gillela

Search another student? (Y o N)
y

Please insert first name of a student:
shivam
patel

Search another student? (Y o N)
```

**Note:** the name of the student is Case Sensitive
